# End Times

## Deception

Daniel 8:12 And an host was given him against the daily sacrifice by reason of transgression, **and it cast down the truth to the ground;** and it practised, and prospered.

9 Then from one of the prominent horns came a small horn whose power grew very great. It extended toward the south and the east and toward the glorious land of Israel. 10 Its power reached to the heavens, where it attacked the heavenly army, throwing some of the heavenly beings and some of the stars to the ground and trampling them. 11 It even challenged the Commander of heaven's army by canceling the daily sacrifices offered to him and by destroying his Temple. 12 The army of heaven was restrained from responding to this rebellion. **So the daily sacrifice was halted, and truth was overthrown.** The horn succeeded in everything it did.

a body

# Every Creature Was Given A Covering in order to be in relationship with God!

- Isaiah 6:1 ¶ In the year that king Uzziah died I saw also the Lord sitting upon a throne, high and lifted up, and his train filled the temple.

- 7 Therefore at that time, when all the people heard the sound of the cornet, flute, harp, sackbut, psaltery, and all kinds of musick, all the people, the nations, and the languages, fell down and worshipped the golden image that Nebuchadnezzar the king had set up.

# The Language of Life

Science discovered in the last century that Life has a language, DNA.

Written with four chemical molecules to form a code or Language.

C - for Cytosine  
G - for Guanine  
T - for Thymine  
A - for Adenine

When strung in chains or groupings of three (codons) they code for all the proteins that govern the operation of cells. And also for the development and creation of the cell themselves.

### **EXPANSION OF THE GENETIC ALPHABET IN NUCLEIC ACIDS BY CREATING NEW BASE PAIRS**

Ichiro Hirao and Michiko Kimoto

#### **2.1 Introduction**

Contemporary DNA molecules store genetic information in a linear sequence of four different bases, A, G, C and T, and form double-stranded helices by the complementary A–T and G–C **base pairing** between the strands. The complementarity of the two sets of **base pairs** is a fundamental aspect of the central dogma of genetic information flow, comprising replication, transcription and translation. Through the complementarity, DNA molecules are amplified by DNA polymerases in replication and are copied to RNA molecules by RNA polymerases in transcription. The **base** sequences of the RNA molecules are then transferred into the amino acid sequences of proteins in translation. In replication and transcription, the nascent DNA and RNA molecules are synthesized by **base pairing** between the incoming triphosphate substrates and the bases in DNA template strands. In translation, **base pairing** in the codon–anticodon interaction between the mRNA and the aminoacylated tRNA is also a principal event in the ribosome machinery.

The mechanisms of genetic information flow underlie all of the recombinant techniques of modern biotechnology. Using these technologies, researchers have been generating novel nucleic acids and proteins with specific sequences of components, nucleotides for nucleic acids and amino acids for proteins, by preparing cloned DNA templates in accordance with their intended use. One serious limitation of recombinant technology is its laboriousness for the site-specific incorporation of non-standard **extra** components into nucleic acids and proteins. Recent progress in a wide variety of structural analyses has permitted the design of **extra** functional components for the creation of novel nucleic acids and proteins [1–12]. Furthermore, evolutionary engineering methods using combinatorial libraries, such as *in vitro* selection, DNA shuffling and ribosome display, have been developed and preparing libraries containing **extra** components will open the door to new evolution systems [13,14]. Therefore, there is an urgent need to develop a fundamental method that allows the site-specific incorporation of **extra** components into nucleic acids and proteins.
